*OFFDAYS · On-device training companion
for youth athletes*

A smarter way to develop club athletes

between team practices and games

PILOT PROGRAM

We're looking for club partners to pilot OFFDAYS with their athletes. Your coaches get a dashboard that shows who's training on off-days, whose form is improving, and whose weak hand needs work — before practice starts.

Let's talk about what your athletes need.

Why Clubs Need This

The gap between team practice and individual development

The reality most clubs face

Your athletes show up to practice. They run drills. They play games. But what happens on the days between? The reps that build real skill — wall ball, footwork, conditioning — happen when the coach isn't watching.

What gets lost without visibility

- Athletes who need extra work don't get directed to it — they just show up unprepared.
- Coaches spend practice time on fundamentals that should have been done at home.
- Parents want to help but have no way to see if their athlete is actually improving.
- The athlete who trains hard gets no credit for it; the one who coasts doesn't get nudged.
- Film study — watching game tape, learning IQ — is assigned but never tracked.

The result

Practice becomes a remedial session for players who didn't train, and a waste of time for players who did. Neither group gets what they need.

What Is OFFDAYS?

On-device pose analysis. No video leaves the phone.

The athlete records a workout on their phone

Open the app. Point the camera at your wall ball, your push-up form, your squat. The phone's camera analyzes every rep in real time using pose detection that runs entirely on the device — no cloud, no upload, no video leaving the phone.

Only derived numbers go to the server

- How many reps were completed
- Which hand was used on each rep
- Timing and rhythm — was the athlete rushing?
- Confidence scores from the pose model
- Range of motion — full reps or shallow ones?
- Form quality score (0-100) with component breakdown

What the athlete gets back

A form score for every session. A coaching note that says what to work on. A technique fix tailored to that session. XP and streaks that make training visible and rewarding. A weekly plan for the days between team obligations.

The athlete's home screen: current assignment, weekly plan, and film clips.

Director Dashboard

Whole-program view for Nashville Dogs · Joel White

Team

Window

All teams

Last 7 days

This dashboard contains no video. Athletes' footage is processed on their own phones and never uploaded — what you see here are counts, timings, and consistency.

Plan & seats

▶ Compare plans

Last week's team numbers

This is what goes out in the Monday email. No athlete is named in it, on purpose — it gets forwarded and read aloud. Names stay on this page.

Preview the email

Send it to me now

☐ Email it to me on Mondays

Needs a nudge

Automatic recognition

Someone senior who signs the big ones (optional)

Marcus Vale

Director of Player Development, former pro

Reserved for the long streaks by default. A note from someone like that means something because it does not arrive every week — putting their name on a three-day streak spends exactly what made it worth having. Leave it blank and everything comes from the athlete's coach.

Director Dashboard

Whole-program view for Nashville Dogs · Joel White

The director sees every athlete on every team. Total program XP, the nudge list (athletes who haven't logged in recently), automatic recognition milestones, active assignments across all teams, and the film-shelf coverage showing which clips the whole club has watched. You can see the health of your entire program at a glance — no individual check-ins required.

Coach Dashboard

Team view for 2031 Red · Coach Tommy

A coach sees only their assigned team. Per-athlete form scores broken down by consistency, depth, tempo, and endurance. Streak counts. Weekly volume. Weak-hand vs. strong-hand balance — the lopsided player jumps out immediately. Athletes who need a nudge are flagged. The film shelf shows which Lacrosse IQ clips have been assigned and who has watched them. Walk into practice knowing exactly who needs attention before the whistle blows.

Athlete Dashboard

Training home for a 2031 Red athlete · Ryder Kallberg, Attack

The athlete's own home: their current wall-ball assignment with live rep progress and off-hand balance, their weekly plan for off-days broken down by day of the week, and the film clips with quiz questions. The plan's daily line respects the athlete's age — this 13-year-old gets a concrete, achievable target without overload language. Every rep they log shows up here. Every session has a form score. Training becomes visible to the athlete themselves.

What This Means for Your Club

Three roles · Three views · One program

For the Director

- See the whole program's health without individual check-ins.
- Know which athletes haven't logged in — and when.
- Track film-study coverage across the entire club.
- Identify coaches whose teams are training and whose aren't.
- Demonstrate to parents that the club invests in athlete development.

For the Coach

- Walk into practice knowing who trained and who didn't.
- See form scores before the warm-up — address issues immediately.
- Know whose weak hand is lopsided before you design drills.
- Assign film clips and see who actually watched them.
- Stop spending practice time on fundamentals that should be done at home.

For the Athlete

- A weekly plan for off-days — specific, achievable, age-appropriate.
- Every rep has a form score. Training becomes visible to the athlete.
- Film clips with quiz questions that build Lacrosse IQ.
- XP and streaks that make training rewarding.
- A coaching note after every session that says what to work on next.

All video stays on the phone

Pose detection runs entirely on the device. No video is uploaded. Only derived counts — rep count, hand, timing, confidence, range of motion — leave the phone. The athlete's privacy is protected by design.

Join the Pilot

We're looking for club partners. Let's build this together.

What you get as a pilot partner

- ❑ The full OFFDAYS app for your athletes — wall ball, conditioning, film study.
- ❑ A free demo database seeded with your club's roster and team structure.
- ❑ A 30-minute walkthrough with the developer to get your coaches signed in.
- ❑ Direct access to the developer for feedback, feature requests, and questions.
- ❑ Your logo on the app header — this is your program, branded for your athletes.
- ❑ No cost during the pilot. We want partners, not customers.

What we ask

- A coach or director willing to walk through the dashboards with us.
- Honest feedback — what works, what doesn't, what your athletes need.
- A small roster to seed the demo (10-15 athletes is plenty to show the value).
- About 30 days of piloting before we decide how to move forward together.
